

AI Productivity Assistant

Project Title

AI Productivity Assistant for Workplace Automation

Project Overview

The AI Productivity Assistant is a smart system designed to help automate workplace tasks using Artificial Intelligence. The assistant improves productivity and efficiency by helping users complete common office tasks quickly and professionally.

The system is designed to support:

- Email generation
- Meeting summarization
- Task planning
- Research assistance
- Chatbot interaction

The project demonstrates the practical use of AI tools such as ChatGPT and prompt engineering techniques to automate business communication and task management.

Problem Statement

Many employees spend large amounts of time performing repetitive workplace tasks such as writing emails, summarizing meetings, planning tasks, and conducting research.

This project aims to solve this problem by creating an AI-powered assistant that automates these activities and improves workplace productivity.

Project Objectives

1. Develop an AI-powered productivity assistant.
 2. Automate repetitive workplace tasks.
 3. Improve workplace communication efficiency.
 4. Demonstrate prompt engineering skills.
 5. Build a practical and functional AI solution.
 6. Ensure ethical and responsible use of AI technologies.
-

Features of the System

1. Email Generator

The assistant can generate professional workplace emails based on user instructions.

2. Meeting Summarizer

The assistant summarizes meeting notes into key discussion points and action items.

3. Task Planner

The system helps users organize and plan tasks effectively.

4. Research Assistant

The assistant provides quick research support and information gathering.

5. AI Chatbot

Users can interact with the system through chatbot-style communication.

Technologies Used

- Python
 - GitHub
 - OpenAI / ChatGPT
 - VS Code
-

Ethical Use of AI

The project promotes responsible AI usage by:

- Avoiding harmful or misleading information
 - Maintaining professionalism in generated responses
 - Respecting user privacy
 - Encouraging ethical AI practices in the workplace
-

Sample Prompts Used

Email Prompt

Write a professional email requesting a project progress meeting.

Meeting Summary Prompt

Summarize the following meeting notes into important discussion points.

Task Planning Prompt

Create a task schedule for completing a software development project.

README.md

```
# AI Productivity Assistant

## Project Overview
The AI Productivity Assistant is designed to automate workplace tasks using Artificial Intelligence.

## Features
- Email generation
- Meeting summarization
- Task planning
- Research assistance
- Chatbot interaction

## Objectives
- Improve workplace productivity
- Automate repetitive tasks
- Demonstrate AI and prompt engineering skills

## Technologies Used
- Python
- GitHub
- OpenAI / ChatGPT

## Author
Nomonde
```

app.py

```
print("Welcome to the AI Productivity Assistant")

while True:
    print("\nChoose an option:")
    print("1. Generate Email")
    print("2. Meeting Summary")
    print("3. Task Planner")
    print("4. Exit")

    choice = input("Enter your choice: ")

    if choice == "1":
        topic = input("Enter email topic: ")
        print(f"\nGenerated Email about: {topic}")

    elif choice == "2":
        notes = input("Enter meeting notes: ")
        print(f"\nMeeting Summary: {notes[:50]}...")

    elif choice == "3":
        task = input("Enter your task: ")
        print(f"\nTask Planned: {task}")

    elif choice == "4":
        print("Goodbye!")
        break

    else:
        print("Invalid option")
```

requirements.txt

```
openai
python-dotenv
```

prompts.txt

```
Email Prompt:
Write a professional email requesting a project meeting.
```

Meeting Summary Prompt:

Summarize the following meeting notes into key points.

Task Planning Prompt:

Create a task plan for completing a software project.

GitHub Repository Name

AI-Productivity-Assistant

How to Upload to GitHub

1. Login to GitHub.
 2. Create a new repository.
 3. Name the repository AI-Productivity-Assistant.
 4. Add a README file.
 5. Upload the project files.
 6. Commit changes.
 7. Continue updating the repository as the project grows.
-

Conclusion

The AI Productivity Assistant project demonstrates how Artificial Intelligence can be used to improve productivity in workplace environments. The project combines prompt engineering, automation, and AI tools to create a practical solution that supports communication, planning, and information management.
